Below is an email that references the facility that they are concerned about. I have targeted it for a future SPCC inspection but don't have a timetable when we will be able to conduct it.

Hey Boss,
This gentleman contacted me last night about a past spill at the below facility. He also is complaining that they are not operating under an appropriate SPCC plan. Wasn't sure if you knew anything about this, and if you had already sent Tom or someone else out to follow up on this. Just thought I should kick it your way.

Chris

Chris: It was a pleasure speaking with you yesterday. The Chico Station is located on 1810 about 3.5 miles west of the town of Chico. There is an Enterprise Products sign on the main road on the left coming from Decatur, and the tank at issue is within this facility down a ways. It's a 10,000 bbl tank.

The company name is Enterprise Products, on behalf Enterprise Crude Pipeline, a successor to TEPPCO. The contact people are Greg Miller, Rodney Sartor or Randolph Stuart.

Randolph Stuart, Senior Environmental Coordinator at (405) 208-0503, Stephen Lee, Manager, Field Environmental at (918) 530-0404.
Both Gregory E. Miller, P. G. and Rodney M. Sartor can be contacted at 713-381-8780; an additional number for Mr. Miller is 713-376-5276.

In 2011, a catastrophic failure occurred and 10,000 bbls of crude oil spilled at the Chico Station in Wise County and made its way to a waterway nearby. The secondary containment area is made up of sand and gravel, not an impervious base. Additionally, no amended SPCC plans have been produced. Enterprise is still cleaning up at a cost of over \$6M. There have been previous spills at this site in addition to the 2011 spill, yet the secondary containment area still consists of sand and gravel rather than an impervious base.

Please let me know if you have any additional information. If it all possible, please keep me updated on your investigation and findings. I may want to use those as evidence in our trial.

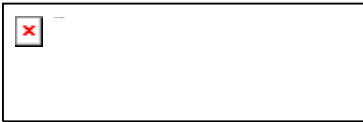

Thanks - JWF
